

HYGRA

Due to its sheath-core structure, this special nylon fabric shows an outstanding moisture absorbing/releasing property

Control Humidity and Minimize Discomfort

Keep the cloth condition comfortable, and keep away humidity and stickiness.
Surface of the fabric stays smooth by releasing humidity from core part of polymer.

- ▶ “HYGRA” is a sheath-core structured fabric made with a water absorbing polymer which absorbs water 35 times more than its own weight, enfolded by nylon.
- ▶ Utilizing the nylon’s thin, light and flexible features, HYGRA has both absorbing and releasing properties.
- ▶ This nylon’s high absorbing/releasing performance outweighs cotton and remove stickiness and keep dry.
- ▶ HYGRA has been achieving great success in a wide range of areas like sportswear, undergarments, socks and industrial fabrics.

FEATURES

- Provide thin, light, flexible features of Nylon.
- Remove stickiness and moisture by its excellent absorbing/releasing property.
